Dear Sir/Madam,

I had the pleasure of supervising Ahmed Elmahy at Egybiotech company and at Alexandria Cancer Research Cluster. He is a very hard working, warm and delighted student. I am very impressed by his creativity, intelligence and computer science skills.

Ahmed joined our team as a research assistant from May 2016 till now. He currently participates in Nato biorad project: a project funded by Science for Peace and Security Programme aiming to development of a panel of biomarkers as novel tool for early detection of radiation exposure.

Egybiotech was established in August 2012 as a private research organization working primarily in the area of health, with focus on biotechnology research applications. Besides conducting commissioned research projects and conducting research training workshops, our main interest is to develop our own biotech products through our own R&D process. We have a broad research portfolio in multiple areas of cancer research, health service evaluation, and research at the interface of health and social science. The main focus is to produce, validate and patent molecular diagnostics based on multi-gene assays capable of predicting incidence or outcome of disease or treatment. The company is now ready for round B of VC funding.

I find him articulate and he can express himself very well both in formal teaching contexts and in informal discussions. He brings to his studies an intellectual rigor and emotional depth often not encountered among other workers. He is a humble individual who gets along well with his peers and the entire team. I strongly recommend him for this program and would appreciate your most favorable considerations to his application. Please feel free to contact me at any time.

Best Regards

*Dr. Yasmine Issa  
Lecturer of Medical Biochemistry and Molecular Biology  
Alexandria Faculty of Medicine  
Senior researcher in Egybiotech*
